Future Proof Your Healthcare Enterprise

Solve the complex puzzle of care and business coordination.

Cloud computing, mobility, social networks and big data—combined with healthcare’s mandate for faster, stronger, barrier-free connections between providers, payers and patients is forcing organizations to fundamentally change the way they do business. From smart phones to wearable activity trackers, individuals are getting real-time health information on everything from sleep quality to calories burned. There’s even data suggesting that the uninsured coming into the HIX Marketplace have a higher density of smart phone users than the population at large.

Most enterprises have invested in critical legacy systems and accumulated a variety of applications across their individual lines of business. Now they’re faced with inconsistent and missing data, disconnected patient, member, business partner and employee experiences and the conundrum of how to position for the rapidly evolving digital healthcare models and technologies. The ability to retain market share and remain viable is directly related to the ability to securely and seamlessly share information with people, systems and “things” - both internally and externally – and, meet the digital user experiences individuals have come to expect.

Covisint’s platform provides the missing link in the complex puzzle of care and business coordination – securely connecting people, systems and “things” across your enterprise – from patients, members, providers and payers to employees, supply chain and business partners. The platform enables enterprises to securely integrate both clinical and non-clinical systems and securely display information to a variety of users based on their role, device type and location. By empowering innovative business models, faster time-to-market and higher levels of security, Covisint provides the infrastructure to truly streamline transitions of care, lower operational cost and make doing business with healthcare enterprises easier and more secure.

Speed and security is the healthcare industry’s new currency.

The need to quickly embrace a uniform, yet secure digital and mobile strategy is critical – and few organizations understand the insufficiency of upgrading individual lines of business or bringing on mobile devices in operational silos. To thrive in both the present and future healthcare environment enterprises need a solution that enables them to break down the existing internal and external data and information barriers, keep multiple legacy systems hidden in the background – and present a seamless user experience; an interface that aggregates and surfaces the trusted information without exposing back-end complexities.

At Covisint, we believe a unified cloud platform is the best long-term strategy to future proof IT infrastructures. Enterprises need a solution that grows and adapts to organization’s needs without an overhaul of existing investments. The Covisint platform enables enterprises to quickly consolidate the applications, data and all the other tools necessary to run their business – eliminating the procedural and technological silos that prevent enterprises from working together the way they should.
Our B2B Cloud Platform
Connects people, systems, and “things” and is comprised of a set of integrated and modular cloud-based technologies. In today’s connected world, our platform helps enterprises manage the identities they do business with and helps enterprises turn data into information.

Identity & Access
- Manage digital identities for those who you do business with

Integration & Aggregation
- Integrating and aggregating complex information and data

User Experience
- Presenting trusted information on any device to the user

Our B2X Solutions
Enable solutions that allow enterprises and industries to solve complex information and user management challenges across Business-to-Partner (B2P), Business-to-Customer (B2C) and Business-to-Enterprise (B2E) relationships.

Business-to-Partner (B2P)
- Suppliers
- Dealers
- Distributors
- Joint Ventures

Business-to-Customer (B2C)
- Corporate Customers
- Franchisees
- Consumers

Business-to-Enterprise (B2E)
- Employees
- Contractors
- Business Units
- Mergers & Acquisitions
